

Ecosystem restoration means preventing, halting and reversing the damage - to go from exploiting nature to healing it.

WORLD ENVIRONMENT DAY

5th June, 2021

REIMAGINE. RECREATE. RESTORE.

This is our moment. We cannot turn back time. But we can grow trees, green our cities, rewild our gardens, change our diets and clean up rivers and coasts. We are the generation that can make peace with nature.

- Every three seconds, the world loses enough forest to cover a football pitch and over the last century we have destroyed half of our & wetlands
- 50 per cent of our coral reefs have already been lost and up to 90 per cent of coral reefs could be lost by 2050
- Ecosystem loss is depriving the world of carbon sinks, like forests and peatlands, at a time humanity can least afford it.
- Global greenhouse gas emissions have grown for three consecutive years and the planet is one pace for potentially catastrophic climate change.

Small steps for bigger change

Use Fluorescent bulbs

You can save energy and money too

Turn off your computer at night

Save 40 watts a day

Recycle

You will help reduce pollution

Go vegetarian

It will cut down the carbon emissions

Use less tissues

Or use half-do you really need one whole piece?

Use both sides of paper

Try to use less paper and go digital.

Recycle old devices

You can cut 20-50 million tonnes of e-waste that are being generated every year

Rethink bottled water

Using refillable water bottle instead of plastic bottles can save water and reduce waste

Bike to work

Bike instead of driving a car to reduce CO2 emission

Fix leaky pipes

It can save an average of 10,000 gallons of water per year

Take shorter showers

You will save water and electricity on heating

Plantation

Trees provide food and oxygen. They help save energy, clean the air, and help combat climate change.
